Stedman's Dictionary

Define:

Stedman's Medical Dictionary 27th Edition

autologous (aw-tol'o-gus)

1. Occurring naturally and normally in a certain type of tissue or in a specific structure of the body. 2. In transplantation, referring to a graft in which the donor and recipient areas are in the same individual, or to blood that the donor has previously donated and then receives back, usually during surgery. 3. Sometimes used to denote a neoplasm derived from cells that occur normally at that site, e.g., a squamous cell carcinoma in the upper esophagus.
SYN: autogenous (1) . [auto- + G. *logos*, 1 relation]
